

ULTRA FILTER

UF8C

Filtration down to .02 micron

—excellent for organic color, colloidal clay, virus, bacteria and cyst reduction

Unique valve design allows for automatic clean water backwash

—cleanses UF membranes and flushes tank without the use of solenoids

Low maintenance

—no chemicals to replenish or cartridges to routinely replace

With every backwash, water flows out of the bottom of the tank and out the drain, leaving no sediment in the bottom of the tank.

- Backwashes in 3 minutes, using only 15 gallons of water
- Digital control valve allows for quick, simple setup
- High flow rates capable of 12 gallons per minute
- Membranes are NSF Standard 61 Certified
- Tank is NFS Standard 44 Certified
